## Executive Summary

This report provides information regarding the core mathematics curricula that school districts throughout Washington State are using at the elementary, middle, and high school levels. It also shares information about how frequently school districts plan to adopt and/or purchase mathematics instructional materials.

This Executive Summary highlights important pieces of legislation critical to this project and high-level survey results.

Following revision of the state's $\mathrm{K}-12$ mathematics standards in spring and summer 2008, the Legislature directed the Office of Superintendent of Public Instruction (OSPI) to recommend "...no more than three basic mathematics curricula each for elementary, middle and high school grade spans." (RCW 28A.305.215, (7)(a)). An instructional materials review process was implemented for core/comprehensive mathematics materials (Grades K-8 in June 2008 and Grades 9-12 in November 2008) in order to determine the recommendations. The full results of each review, including the OSPI recommendations, will be presented in detailed reports analyzing the degree of alignment each program has to the revised mathematics standards. OSPI will finalize the recommendations for elementary and middle school grade spans in December 2008, as a result of the review and comment from the State Board of Education (SBE). The report and recommendations for the high school recommendations will be presented to the SBE in January 2009 and will likely be finalized in spring 2009.

Over the past 12 months, OSPI has worked closely with mathematics colleagues across the state to gain a clear picture of the landscape of mathematics curricula used in school districts in an effort to provide the most efficient and targeted support to districts for implementing the revised standards in conjunction with core mathematics instructional materials. The 2008 Legislature recognized this as an important piece of the puzzle for improving mathematics education by passing Second Substitute House Bill 2598 that requires OSPI to conduct a comprehensive survey of the mathematics curricula being used by school districts at all grade levels and the textbook and curriculum purchasing cycle of the districts. This report was written in response to this requirement.

Collection of the necessary data occurred via two statewide surveys that were administered in a collaborative effort between OSPI and the nine regional Educational Service Districts (ESDs):

1. Mathematics Curricula Usage Survey: The first process was to determine curricula usage for mathematics in the state at the elementary, middle, and high school levels. Each of the ESD mathematics coordinators committed to collecting accurate information regarding the curriculum used at the elementary, middle, and high school levels. As a starting point, OSPI shared general curricula usage data collected between fall 2007 and spring 2008 with the ESDs. Each ESD mathematics coordinator contacted district curriculum leaders in their region to
verify curriculum usage information. This data was collected in fall 2008 and reported to OSPI in October 2008, where it was aggregated for this report.
2. School District Adoption/Purchasing Cycles: The second portion of the process was to collect data on the adoption and/or purchasing cycle of districts. A statewide survey was issued that requested school districts to provide information regarding their adoption and purchasing cycles at the elementary, middle, and high school levels. One week prior to the close of the purchasing cycle survey, OSPI provided information regarding which districts had completed the survey to ESD mathematics coordinators who followed up with phone calls to districts that did not complete the survey. The window for completion of this survey was October 10-31, 2008. We anticipated that many districts may not have a standard curricula "adoption" process, so for the purpose of this survey, adoption and purchase were used interchangeably.

## Results

Data was collected from school districts on which mathematics curricula are currently used (as of September/October 2008) throughout the state at the elementary, middle and high school levels. Data on curricula usage was collected from the majority of districts. Ninety-nine percent, or 293 of 295 districts reported, representing 99.9 percent of the statewide student population. However, not all districts reported elementary, middle, and high school curricula usage. Likewise, 141 (48\%) of 295 total school districts across the state responded to the adoption/purchasing cycle survey, representing 67 percent of the statewide student population.

It should be noted that due to the multiple versions of curricula materials in use and due to the fact that during the data collection process many of the respondents were unaware of the version (copyright year) of the materials used, only the names of programs, without copyright years, are included in this report.

## Elementary School Level (Grades K-5):

- Most frequent curricula used: Of the 290 districts that reported, the two programs that are used with the majority (65.49\%) of the state's student population are:
o Everyday Mathematics (75 districts serving 33.61 percent of the state's student population).
o Investigations (68 districts serving 31.88 percent of the state's student population).
- Adoption cycles: Of the 140 districts that reported their district's elementary school adoption/purchasing cycle:
o Fifty-four percent plan to adopt or purchase new materials in the next two years (2008-09 or 2009-10). These districts serve 31 percent of the state's student population.

## Middle School Level (Grades 6-8):

- Most frequent curricula used: Of the 267 districts that reported, the curricula used with the majority of the state's student population (64.31\%) is Connected Math Project (CMP). One hundred sixty of the districts reporting currently use CMP.
- Adoption cycles: Of the 138 districts that reported their district's middle school adoption/purchasing cycle:
o Forty-four percent (61 districts) plan to adopt or purchase new materials in the next two years (2008-09 or 2009-10). These districts serve 22 percent of the state's student population.

## High School Level (Grades 9-12):

- Curricula used: Of the 295 districts statewide, 246 of them have at least one high school. Of the 246 districts providing high school, 189 (approximately 77\%) reported curricula usage at the high school level.
o Approximately 50 percent of districts that reported serve their students using traditional curricula materials (Algebra I and Geometry). One hundred twenty-five districts reported using Algebra I curricula while 120 districts reported using Geometry curricula. Approximately 55 percent of the state's student population is represented in this data.
o Sixty-four districts reported using integrated curricula for high school mathematics instruction (Mathematics I and II). These districts represent approximately 36 percent of the state's student population.
- Adoption cycles: Of the 134 districts that reported their district's high school adoption/purchasing cycle:
o Fifty-three percent of the districts reporting (71 districts) plan to adopt or purchase new materials in the next two years (2008-09 or 2009-10). These districts serve 37 percent of the state's student population.

## I. Introduction

The importance of the K-12 public school system to deliver graduates with a strong mathematical background is clear. Employers need a workforce that possesses highlevel math skills in order to compete in the global economy. All states in the nation are faced with the challenge to produce mathematically proficient graduates. To access desirable job opportunities, students today require mathematics education that goes far beyond what was needed by students in the past. Student performance on state assessments, such as the Washington Assessment of Student Learning (WASL) has shown little to no gain in several grade levels over the past three years. Approximately 50 percent of sophomores in 2008 passed the mathematics portion of the WASL. In 2006, 45 percent of Washington State high school graduates attending two-year colleges needed remediation in mathematics. There is still work to be done in order to increase student achievement and learning in mathematics.

With the passage and funding of Legislation during the 2007 session (Second Substitute House Bill 1906), the state of Washington began a new phase in its journey to strengthen mathematics and science education for the 2007-09 biennium. The 2008 Legislative Session provided further emphasis on this work as part of Second Substitute House Bill 2598 and Senate Bill 6534.

Pursuant to SSHB 1906 (2007 session) and Senate Bill 6534 (2008 session), OSPI was directed to revise the 2006 mathematics standards based on recommendations from the State Board of Education (SBE). Revision of the K-12 mathematics standards began in October 2007. Hundreds of state and national mathematics educators and experts provided input and insight on the revised standards throughout the process. The final K8 standards were approved by the SBE and adopted by the Office of Superintendent of Public Instruction (OSPI) in April 2008, and the 9-12 revised standards were adopted in July 2008. The final adopted standards provide greater clarity about what is expected of students in each grade, more explicit guidance to educators about what to teach and when, and increase the rigor of mathematical content to ensure more Washington students succeed.

A common training process and materials was developed and delivered across the state. This training provided strong support to school districts and teachers throughout the state for building understanding of and delivering instruction based on the revised standards. Mathematics coordinators (funded by the 2007 Legislature) for each of the nine regional Educational Service Districts (ESDs), in close coordination with OSPI, trained over $300 \mathrm{~K}-12$ mathematics professional development facilitators. Since June 2008, these facilitators have delivered training to over 17,000 mathematics educators throughout the state.

Following revision of the state's K-12 mathematics standards in spring and summer 2008, the Legislature directed OSPI to recommend "...no more than three basic mathematics curricula each for elementary, middle and high school grade spans."
(RCW 28A.305.215, (7)(a). An instructional materials review process was implemented for core/comprehensive mathematics materials (Grades K-8 in June 2008 and Grades 9-12 in November 2008) in order to determine the recommendations. The programs that were reviewed were voluntarily submitted by publishers. Complete results of each review, including the OSPI recommendations, will be presented in detailed reports analyzing the degree of alignment each program reviewed has to the revised mathematics standards. OSPI is currently in the process of finalizing the recommendations for elementary and middle school grade spans as a result of the review and comment from the SBE. Final recommendations for Grades K-8 are scheduled to be made in December 2008. The report and recommendations for the high school recommendations will be presented to the SBE in January 2009 and will likely be finalized in spring 2009. No one curricula will likely align fully to the revised standards; therefore, OSPI will be reviewing K-12 supplemental mathematics materials as a resource for districts in addressing the apparent deficiencies in core curricula.

In order to provide the most efficient and targeted support to school districts, it is necessary to obtain a clear picture of the mathematics curricula used and the adoption cycles of districts. The 2008 Legislature recognized this as an important piece of the puzzle for improving mathematics education by passing Second Substitute House Bill 2598 that requires OSPI to conduct a comprehensive survey of the mathematics curricula being used by school districts at all grade levels and the textbook and curriculum purchasing cycle of the districts.

## II. Process

OSPI collaborated with the nine regional ESDs to administer two statewide surveys collecting the necessary data from school districts regarding the curricula materials used and their adoption/purchasing cycles.

The surveys were:

1. Mathematics Curricula Usage Survey: The first process was to determine curricula usage for mathematics in the state at the elementary, middle, and high school levels. The ESD mathematics coordinators committed to collecting accurate information regarding the curriculum used at the elementary, middle, and high school levels. As a starting point, OSPI shared general curricula usage data collected between fall 2007 and spring 2008 with the ESDs. Each ESD mathematics coordinator contacted district curriculum leaders in their region to verify curriculum usage information. Data was collected, aggregated, and reported in the fall of 2008 to OSPI.
2. School District Adoption/Purchasing Cycles: The second portion of the process was to collect data on the adoption and/or purchasing cycle of districts. A statewide survey was issued that requested school districts to provide information regarding their adoption processes and purchasing cycles at the elementary, middle, and high school levels. The window for completion of this survey was October 10-31, 2008. One week prior to the close of the purchasing
cycle survey, OSPI provided information regarding which districts had completed the survey to ESD mathematics coordinators who followed up with phone calls to any districts that did not complete the survey. We anticipated that many districts may not have a standard curricula "adoption" process, so for the purpose of this survey, adoption and purchase were used interchangeably.

The results of both surveys were collected and analyzed in order to provide an accurate picture of the landscape of the mathematics curriculum usage and adoption in use in Washington State.

## III. Findings

Appendix A provides a comprehensive table of the following data from those districts that contributed to our data collection efforts:
$\checkmark$ Core mathematics curricula currently in use.
$\checkmark$ Elementary, middle, and/or high school adoption cycles.
$\checkmark$ Elementary, middle, and/or high school year of next adoption/purchase.

## Mathematics Curricula Usage Survey

Data was collected from school districts on the mathematics curricula that are currently used (as of September/October 2008) throughout the state at the elementary, middle, and high school levels. Data on curricula usage was collected from the majority of districts. Ninety-nine percent (or 293 of 295 districts) reported, representing 99.9 percent of the statewide student population. However, not all districts reported elementary, middle, and high school curricula usage.

It should be noted that due to the multiple versions of curricula materials in use and due to the fact that during the data collection process many of the respondents were unaware of the version (copyright year) of the materials used, only the names of programs, without copyright years, are included in this report.

The following three tables provide a statewide snapshot of the elementary, middle, and high school mathematics curricula used in the state. A complete listing of the specific curricula used by the reporting districts can be found in Appendix A.

Elementary School (Grades K-5): Table 1 represents the mathematics curricula currently used in the 290 districts that responded to the survey. This represents 98 percent of the 295 districts statewide and 99.9 percent of the statewide student population.

- Most frequent curricula used: Of the 290 districts that reported, the two programs that are used with the majority (65.49\%) of the state's student population are Everyday Mathematics ( 75 districts serving $33.61 \%$ of the state's student population) and Investigations (68 districts serving 31.88\% of the state's student population).

Table 1. ELEMENTARY SCHOOL MATH CURRICULA USAGE

| Elementary School Math Curricula | Percentage of State's Student Population Represented | Number of Districts Using Curricula (out of 290) |
| :---: | :---: | :---: |
| Everyday Mathematics | 33.61\% | 75 |
| Investigations | 31.88\% | 68 |
| Growing with Mathematics | 9.13\% | 17 |
| Math Trailblazers | 7.10\% | 18 |
| Bridges in Mathematics | 4.38\% | 26 |
| Math Expressions | 4.13\% | 6 |
| Math Central | 3.24\% | 12 |
| Scott Foresman - Addison Wesley | 1.62\% | 15 |
| MathLand | 0.82\% | 1 |
| Number Corner | 0.65\% | 1 |
| Saxon | 0.63\% | 12 |
| SRA Math | 0.42\% | 6 |
| Explorations in Math | 0.33\% | 1 |
| Math Connects | 0.33\% | 2 |
| Math in My World | 0.33\% | 2 |
| Kathy Richardson | 0.23\% | 1 |
| Harcourt Math | 0.21\% | 5 |
| Excell Math | 0.21\% | 1 |
| Connected Math Project (CMP) | 0.15\% | 6 |
| Math Their Way | 0.13\% | 1 |
| A+ Anytime Math | 0.12\% | 1 |
| Silver Burdett | < 0.10\% | 3 |
| Mathematics Application | < 0.10\% | 1 |
| Math Advantage | < 0.10\% | 1 |
| Math Connections | < 0.10\% | 2 |
| Transitions Math | < 0.10\% | 1 |

| Modern Curriculum Press (MCP) Math | < 0.10\% | 1 |
| Path to Math Success | < 0.10\% | 1 |
| Various Texts | < 0.10\% | 2 |
| Total | 99.91\% | 290 |

Middle School (Grades 6-8): Table 2 represents the mathematics curricula currently used in the 267 districts that reported. This represents 90.5 percent of the 295 districts statewide and 92.5 percent of the statewide student population.

- Most frequent curricula used: Of the 267 districts that reported, the curricula used with the majority of the state's student population (64.31\%) is Connected Math Project (CMP). Of the districts reporting, 160 currently use CMP.

Table 2. MIDDLE SCHOOL MATH CURRICULA USAGE

| Middle School Math Curricula | Percentage of <br> State's Student <br> Population <br> Represented | Number of <br> Districts Using <br> Curricula <br> (out of 267) |
| :--- | :---: | :---: |
| Connected Math Project (CMP) | $64.31 \%$ | 160 |
| Math Thematics | $5.81 \%$ | 12 |
| College Preparatory Math (CPM) | $3.61 \%$ | 5 |
| Mathscape | $2.97 \%$ | 8 |
| Passports to Mathematics | $2.94 \%$ | 6 |

| Various Texts | $\mathbf{9 2 . 4 9 \%}$ | 267 |
| Total |  |  |
|  |  | \begin{tabular}{l}
\end{tabular} |

High School (Grades 9-12): Of the 295 districts statewide, 246 of them have at least one high school. Of the 246 districts providing high school, 189 (approximately 77\%) reported curricula usage at the high school level.

- Approximately 50 percent of districts that reported serve their students using traditional curricula materials (Algebra I and Geometry). One hundred twenty-five districts reported using Algebra I curricula; while 120 districts reported using Geometry curricula. Approximately 55 percent of the state's student population is represented in this data. Table 3 and Table 4 represent the specific Algebra I and Geometry curricula used in these districts.
- Sixty-four districts reported using integrated curricula for high school mathematics instruction (Mathematics I and II). These districts represent approximately 36 percent of the state's student population. Table 5 represents the specific Mathematics I and II curricula used in these districts.

Note: Curricula usage data was not collected for the materials used by districts to teach Algebra 2 or Mathematics (Integrated) III.

## Table 3. ALGEBRA I COURSE CURRICULA USAGE

| Algebra I Course Curricula | Percentage of State's <br> Student Population <br> Represented | Number of Districts <br> Using Curricula <br> (out of 125) |

| Total | $\mathbf{3 5 . 6 \%}$ | $\mathbf{6 4}$ |

## School District Adoption/Purchasing Cycle Survey

All school districts were invited to complete an online survey that collected information regarding their district adoption and purchasing practices and timelines for the elementary, middle, and high school levels. Curriculum leaders, superintendents, and/or principals from 141 school districts responded to the survey ( $48 \%$ of districts), representing 67 percent of the statewide student population. Table 6 and Table 7 report on the curricula adoption practices of the districts, as well as the general timeline in which they adopt or purchase core curricula materials.

Table 6. SCHOOL DISTRICT CURRICULA ADOPTION PRACTICES

|  | District-wide <br> Curricula Adoption | Each Building <br> Determines which <br> Curricula to Use | No Formal <br> Adoption Policy |
| :---: | :---: | :---: | :---: |
| Elementary School <br> (Grades K-5) | $75 \%$ | $16 \%$ | $9 \%$ |
| Middle School <br> (Grades 6-8) | $75 \%$ | $13 \%$ | $12 \%$ |
| High School <br> (Grades 9-12) | $67 \%$ | $14 \%$ | $19 \%$ |

Table 7. SCHOOL DISTRICT CURRICULA PURCHASING CYCLES

|  | Purchase Less <br> Than Every 6 <br> Years | Purchase <br> Every 6-8 <br> Years | Purchase <br> Every 9-11 <br> Years | Purchase as <br> Needed |
| :---: | :---: | :---: | :---: | :---: |
| Elementary School <br> (Grades K-5) | $11 \%$ | $50 \%$ | $10 \%$ | $29 \%$ |
| Middle School <br> (Grades 6-8) | $11 \%$ | $51 \%$ | $9 \%$ | $29 \%$ |
| High School <br> (Grades 9-12) | $12 \%$ | $52 \%$ | $9 \%$ | $27 \%$ |

The data reported in Table 8 reflects the purchasing timelines of the districts reporting. The percentage of districts is based on the number of districts responding to the survey (Elementary: 140 districts; Middle: 138 districts; High: 134 districts).

Table 8. SCHOOL DISTRICT CURRICULA PURCHASING TIMELINES

|  | Newly Purchased <br> Curricula in 2008 |  | Will Purchase <br> Curricula Within 2 <br> Years |  | Will Purchase <br> Curricula Within <br> 3-5 Years |  | Will Purchase <br> Curricula in 5+ <br> Years |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | \% of <br> districts <br> reporting | \% of <br> student <br> population | \% of <br> districts <br> reporting | $\%$ of <br> student <br> population | \% of <br> districts <br> reporting | $\%$ of <br> student <br> population | $\%$ of <br> districts <br> reporting | \% of <br> student <br> population |
| Elementary <br> School <br> (Grades K-5) | $4 \%$ | $4 \%$ | $54 \%$ | $31 \%$ | $34 \%$ | $17 \%$ | $13 \%$ | $15 \%$ |
| Middle School <br> (Grades 6-8) | $4 \%$ | $1 \%$ | $44 \%$ | $22 \%$ | $34 \%$ | $17 \%$ | $17 \%$ | $18 \%$ |
| High School <br> (Grades 9-12) | $5 \%$ | $1 \%$ | $53 \%$ | $37 \%$ | $26 \%$ | $12 \%$ | $21 \%$ | $14 \%$ |

## IV. Conclusion

While this survey did not collect information from 100 percent of the districts, this data represents the majority of school districts and is the most thorough accounting of mathematics curricula usage to date. In addition, this is the first statewide record of school district adoption and purchasing cycles.

With the majority of school districts adopting or purchasing core curricula at the elementary, middle, and high school levels within the next five years, the state has an important opportunity to provide sound information regarding curricula that aligns with the newly revised mathematics standards for Washington State. Aligned curriculum is
an essential first step towards improving mathematics education for all students in Washington State.

The final recommendations for elementary, middle, and high school basic curricula are scheduled to be made in December 2008 for Grades K-8 and January 2009 for Grades $9-12$. By disaggregating the curricula usage and future purchasing plans of districts collected to date and analyzing which districts are or are not using the recommended curricula, OSPI, in partnership with the Legislature and other statewide service providers, will be able to effectively target resources and support to those districts in greatest need. This data will be compiled in January 2009, following final adoption of the recommended basic mathematics curricula by OSPI.
