WAC 173-435-070  Sampling sites, equipment, and methods.  (1) Da-
ta from all stations shall be considered when determining episode con-
ditions. The department shall specify PM-10 monitoring stations to be
operated continuously during any episode stage for episode management
purposes. Stations from which episode declarations are based must be
located in such a manner that the area represented by that station and
the sources contributing to the episode condition can reasonably be
determined and corrective actions taken.

(2) Sampling and analysis will be done by federal reference or
federal equivalent methods; except the department may approve other
sampling and analysis methods for PM-10 if reasonable site specific
equivalency with the federal reference method has been demonstrated.
This equivalency must be reestablished biennially.
