Strategies to address the workforce implications of the Age Wave

- ✓ Increase wage and benefit (insurance, retirement, childcare, transportation) compensation for the direct care workforce to help attract and retain workers
- ✓ Leverage tax incentives to encourage workers to enter the long-term care field
- ✓ Expand training and develop career paths to enhance workforce skills and job satisfaction
- ✓ Integrate technology to reduce physical burden on caregivers and improve efficiency (e.g., telehealth, robotics)
- ✓ Encourage community-based models of care and support families and other informal caregivers through training and financial assistance to reduce the reliance on formal care settings
- ✓ Enhance public perception of the value of long-term care jobs to shift perceptions and attract more candidates to the field from other sectors of the economy

PART 2
**Food Insecurity and Housing
Instability Among Seniors**

Food Insecurity Among Elders in Washington State

- Although food insecurity among seniors in Washington State is lower than the US average based on national survey data, food insecurity impacts a significant number of seniors, with 28 percent of Basic Food (SNAP) households in Washington State headed by persons aged 60+
- There are currently more than 150,000 households on Basic Food in Washington State headed by persons aged 60+. This is an increase of 63 percent since January 2014, while the overall Basic Food caseload declined by 9 percent over the same time period.

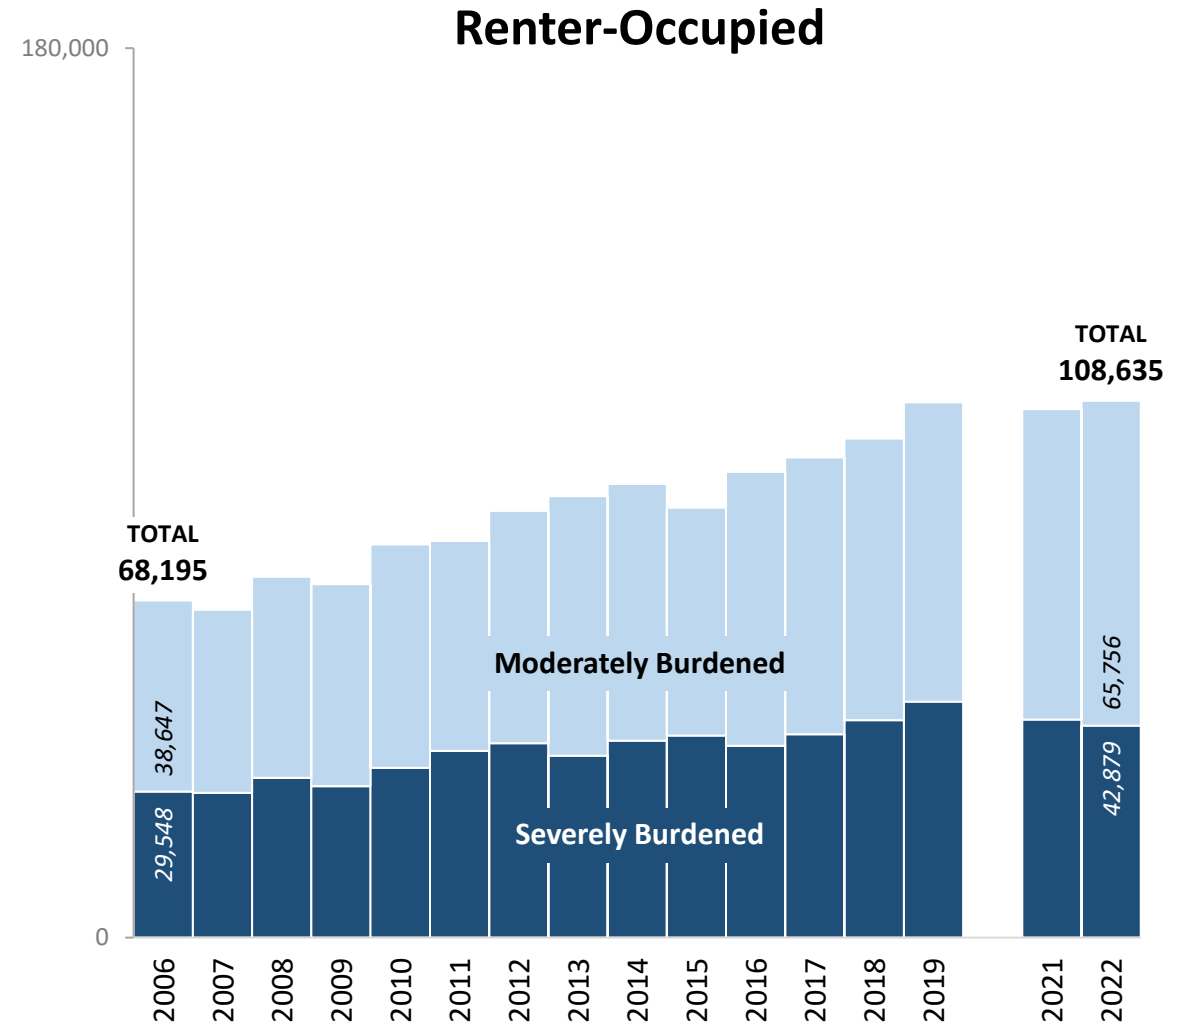

Basic Food Heads of Household Age 60 and Over are Increasing as Percent of the Total

Basic Food data are derived from the DSHS Economic Services Administration EMAPS Data Web at <http://emaps.esa.dshs.wa.gov/DataWebObj/Default.aspx>.

Number of Cost-Burdened Households, 65+

SAMPLE: Includes householders 65 years old and older

Housing costs: for homeowners, the housing costs include mortgage payments, utilities, real estate taxes, insurance, mobile home costs, and monthly condominium costs. For renters, they include rent and utilities.

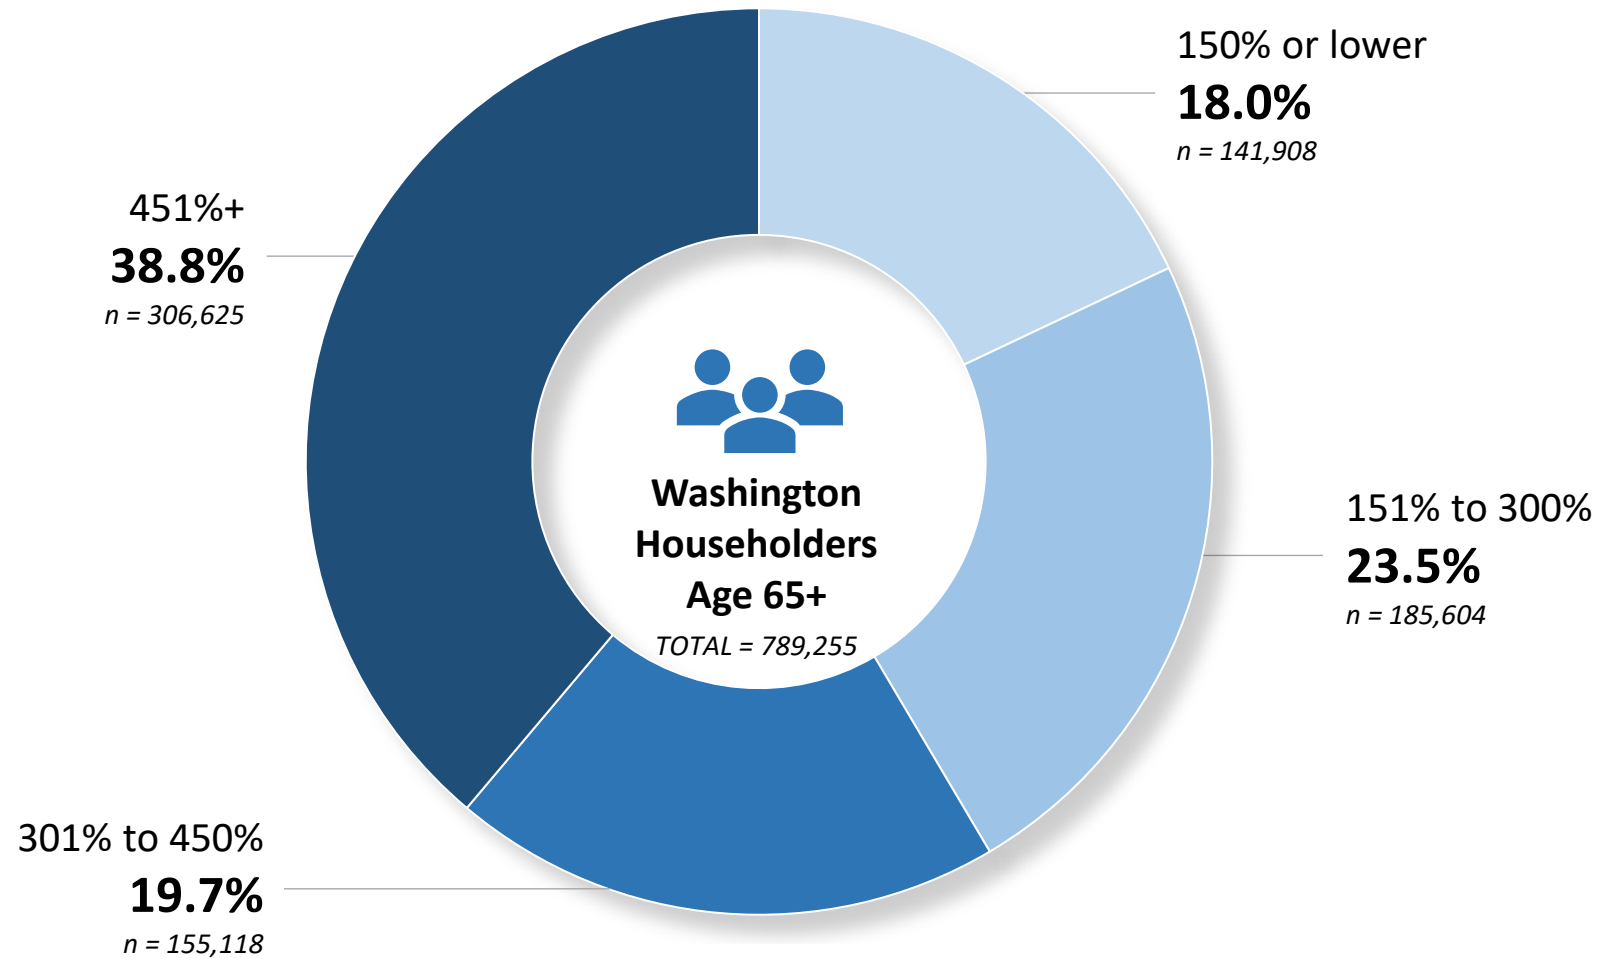

Moderately burdened households spend between 30% to 50% of their income on housing costs. Severely burdened households spend 50% or more of their income on housing costs. Households with non-positive income are assumed severely burdened.

SOURCE: American Community Survey One-Year Public Use Microdata Sample (PUMS). 2020 data not available due to COVID-19.

Homeless or Unstably Housed, All Ages

Homeless or Unstably Housed Adults, 18 to 64

Homeless or Unstably Housed Adults, 65+

Homelessness. Includes clients identified as homeless based on: 1) client living arrangement (Homeless without Housing, Emergency Shelter, Domestic Violence Shelter, Inappropriate Living Situation) from the Automated Client Eligibility System (ACES); 2) address information in ACES indicating that a youth was homeless (e.g., a youth's address was "homeless"); 3) housing service information recorded in the Homeless Management Information System (HMIS); or 4) medical claims with a homelessness diagnosis code ("Z590") from ProviderOne.

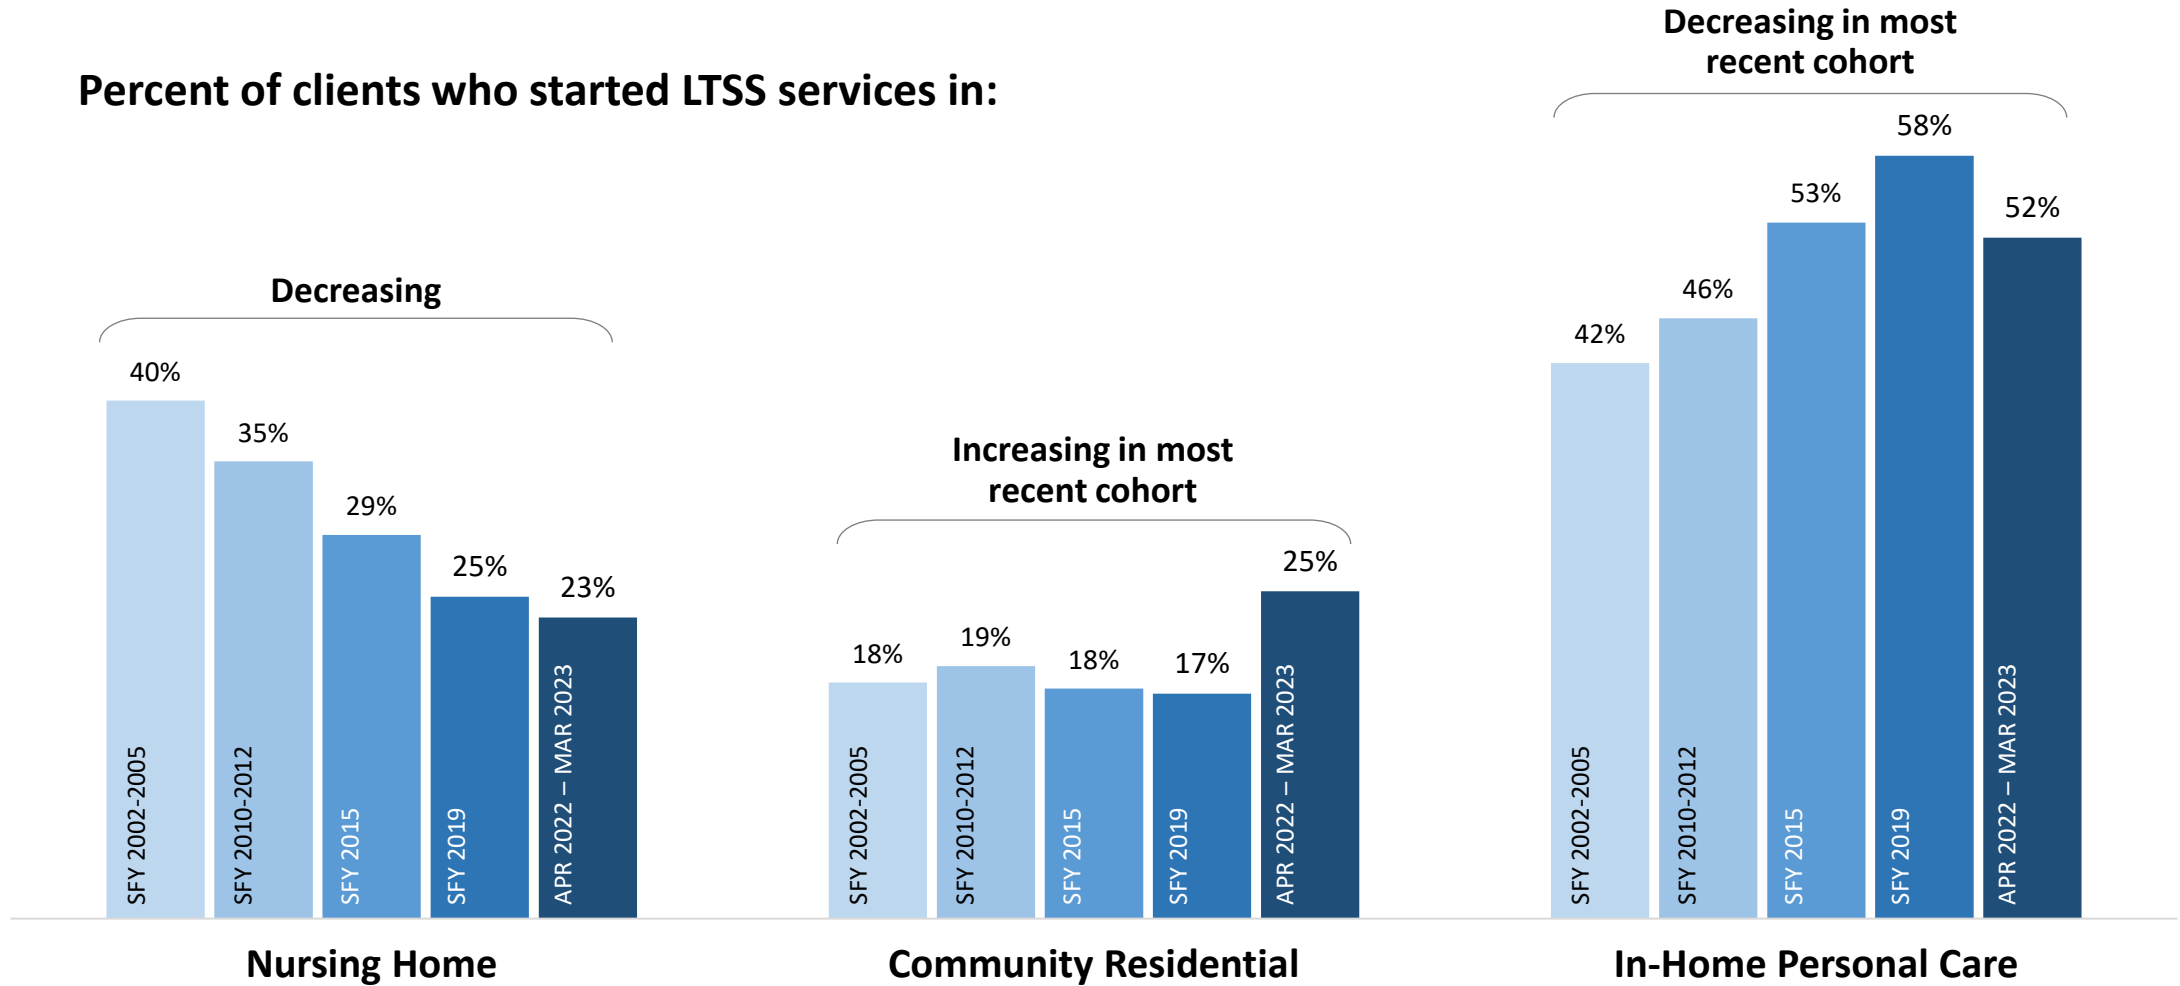

Unstably Housed or Homeless. Includes clients identified as homeless based on the preceding definition OR who were "Homeless with Housing" based on ACES living arrangement data or came into contact with the Department of Commerce's Coordinated Entry system as recorded in HMIS.

Initial Service Modality Is Increasingly In-Home Personal Care

Comparison of cohorts starting LTSS services in SFYs 2002-05, 2010-12, 2015, 2019, and the 12 months ending March 2023

Percent of clients who started LTSS services in:

SOURCE: DSHS Research and Data Analysis Division, Integrated Client Databases.

Prevalence of Homelessness Among Seniors Is Relatively Low, But Growing Rapidly

- **Seniors are increasingly facing moderate to severe housing cost burdens**
- **The number of homeless seniors identifiable through participation in public health and human service program participation doubled from 2018 to 2023**
- There is significant regional variation in housing instability and homelessness driven by regional differences in housing affordability
- Mental health needs and substance use disorders are significant risk factors for homelessness at the individual level
- **The Medicaid LTSS delivery system has become an increasingly important resource for housing supports**

Dementia Prevalence and Forecasts

Measuring Dementia Prevalence Using Statewide Medicare Data

- Dementia prevalence is estimated for CY 2018 Washington State Medicare beneficiaries based on the presence of dementia-related diagnoses in available Medicare claims spanning the 2013 to 2018 time period
- Dementia is defined broadly to include Alzheimer's and related dementia diagnoses (vascular dementia, unspecified dementia, etc.)
- Measuring prevalence using the actual health service experiences of several hundred thousand Washington State Medicare beneficiaries supports more detailed direct prevalence estimates for groups that are often underrepresented in survey data
- Long-term forecasts of dementia prevalence are based on observed prevalence rates for Washington State Medicare beneficiaries and detailed OFM forecasts of state population change through 2040

Additional Measurement Details

- Prevalence estimates were derived from the experience of approximately 675,000 Washington State fee-for-service (FFS) Medicare beneficiaries with at least 6 months of FFS Medicare enrollment in both CY 2017 and CY 2018
- All diagnosis fields recorded on Medicare inpatient, nursing facility, home health, hospice, and carrier claims were scanned to identify indicators of dementia
- Dementia was indicated by the presence of at least one of a specified set of diagnoses over the six-year period spanning 2013 to 2018
- Dementia code set is available upon request

Dementia Prevalence Rates Are Somewhat Higher for Women

AL TSA Long-Term Services and Supports Rebalancing Savings

Annual AL TSA LTSS Service Expenditures* • All Fund Sources • Cumulative Savings SFY 1997—SFY 2024

NOTES: In-scope services for this analysis include AL TSA in-home personal care services, community residential services, and nursing home services. Estimated rebalancing savings include acuity adjustments to per capita expenditures to reflect the expected lower average acuity of clients who would have been served in in-home or community residential settings in the absence of rebalancing.

DSHS | Facilities, Finance, and Analytics Administration | Research and Data Analysis Division • OCTOBER 2024

LTSS Rebalancing Financial Impact Methodology

- Calculate the percentage distribution of ALTA LTSS clients across major service modalities in SFY 1996: In-home Personal Care, Adult Family Homes, Assisted Living, Adult Residential Care, and Nursing Homes
- Simulate the **caseloads** that would have been experienced by major modality if percentage distribution of LTSS caseloads across modalities over the SFY 1997-2024 period had remained the same as experienced in SFY 1996
- Simulate the **expenditures** that would have been experienced by applying actual SFY 1997-2024 per capita nursing home costs and estimated in-home and community residential per cap costs that maintain the same cost-relativity to nursing home costs as observed in SFY 2024. This has the effect of significantly lowering simulated in-home and community residential per cap costs, relative to actual per cap costs, reflecting the expectation that a lower acuity population would have been served in HCBS settings in the absence of rebalancing.
- Compare the total costs of the simulated caseload distribution to the actual and forecast total LTSS costs incurred over the SFY 1997-2024 period. The difference comprises the estimated savings (all funds).

Facts About Older Adult Oral Health

- **Lack of dental insurance.** Many older Americans do not have dental insurance because the federal Medicare program does not cover routine dental care.
- **Untreated tooth decay.** Nearly all adults (96%) aged 65 years or older have had a cavity; 1 in 5 have untreated tooth decay.
- **Gum disease.** About 2 in 3 (68%) adults aged 65 years or older have gum disease.
- **Tooth loss.** Nearly 1 in 5 of adults aged 65 or older have lost all of their teeth. Having missing teeth or wearing dentures can affect nutrition, because people without teeth or with dentures often prefer soft, easily chewed foods instead of foods such as fresh fruits and vegetables.
- **Oral cancer.** Cancers of the mouth (oral and pharyngeal cancers) are primarily diagnosed in older adults; median age at diagnosis is 62 years.
- **Chronic disease.** People with chronic diseases such as arthritis, diabetes, heart diseases, and chronic obstructive pulmonary disease (COPD) may be more likely to develop gum (periodontal) disease, but they are less likely to get dental care than adults without these chronic conditions.
