

**WAC 173-182-385 Nisqually planning standard.** Those covered vessel and facility plan holders that transit or operate within a five nautical mile radius of a point at Lat. 47°06'43"N Long. 122°41'53"W (WGS 1984) must meet the following standards.

<b>Time (hours)</b>	<b>Boom/Assessment</b>	<b>Minimum Oil Recovery Rate % of WCS volume per 24 hours</b>	<b>Minimum Storage Volume</b>
2	A safety assessment of the spill by work boat with trained crew and appropriate air monitoring, with 1,000 feet of boom could have arrived		
3	Additional 2,000 feet of boom, or 4 times the length of the largest vessel whichever is less, to be used for containment, protection or recovery could have arrived		
6	Additional 12,000 feet of boom with at least 2,400 feet of boom being calm water - Current capable appropriate for containment, protection or recovery could have arrived	Capacity to recover the lesser of 3% of worst case spill volume or 12,500 barrels within 24-hour period could have arrived. 50% must be able to work in shallow water environments - Depth of 10 feet or less	1 times the EDRC
12	Additional 20,000 feet of boom with at least 1,000 feet of boom calm water - Current capable, for containment, protection or recovery could have arrived	Capacity to recover the lesser of 10% of worst case spill volume or 36,000 barrels within 24-hour period could have arrived. At least 50% of the skimming capability must be able to work in shallow water environments - Depth of 10 feet or less	1.5 times the EDRC
24	Additional 20,000 feet of boom for containment, protection or recovery could have arrived	Capacity to recover the lesser of 14% of worst case spill volume or 48,000 barrels within 24-hour period could have arrived	2 times the EDRC
48	More boom as necessary for containment, recovery or protection	Capacity to recover the lesser of 25% of worst case spill volume or 60,000 barrels within 24-hour period could have arrived	More as necessary to not slow the response
